

The Primary Health Care Mental Health Clinician (MHC) is an integral member of a multi-disciplinary Primary Health Care team that promotes health and wellness within the community. The MHC, guided by NRHA Primary Health Care principles is particularly interested in improving mental health status across the lifespan of the residents of the NOR-MAN Region. This will be achieved through his/her expertise in mental health promotion, identification and case finding, crisis assessment and planning, comprehensive clinical assessment, therapeutic counseling/therapeutic relationship, case management, and consultation. This clinician will participate in promoting public awareness of mental health issues to decrease stigma. They will utilize best practice strategies of early identification and intervention in mental illness to limit the negative impact on clients' capacity to function in the community. The clinician will also practice within the context of Co-Occurring Disorders Initiative (CODI). This position requires flexibility with regards to hours of work, work schedules may include evenings and weekends. A Criminal Records check and Child Abuse Registry check is also a requirement.
